Amazon Prime Movies and TV Shows – EDA Report

1. Introduction

This project explores the Amazon Prime Movies and TV Shows dataset using Exploratory Data Analysis (EDA).

2. Dataset Description

The project uses two datasets: Titles and Credits. They were combined using the common ID column.

3. Data Cleaning

Missing values and duplicate records were examined. Duplicate title IDs were handled before merging.

4. EDA Performed

The analysis includes content type, genres, production countries, runtime, IMDb ratings, release years and directors.

5. Key Insights

Key findings will be added after reviewing the actual statistical results and graphs.

6. Conclusion

The analysis helps identify patterns and understand the characteristics of the available content.
